**Subject:** GEB paper

Dear Dr. Kubatzki:

Dr. Lohmann (Gerrit Lohmann ([Gerrit.Lohmann@awi.de](mailto:Gerrit.Lohmann@awi.de))) wished to get in touch with you, and he asked me for your coordinates. I told him that you specifically asked me not to provide those details to your coauthors, but that I could forward a message to you if he wished. Please find below the message that he asked me to forward to you.

Sincerely,  
David Currie

Hello Claudia,  
it was our mistake that we have not formally asked you in advance of the GEB paper. The text is very much like the earlier version which you agreed on. The comments of the GEB referees were not available to you, but they were quite positive and were not related to your part of the paper. Ulrike just wanted to be fair to acknowledge your contribution on the manuscript. I really regret that we did the mistake, but Ulrike and me have tried to reach you several times. Also, I have asked you what to do with the computer simulations you did at AWI.

I assume that you are now Claudia Thresher (I guess from your web page). I wish you and Duane the best. What I suggest is a solution of the problem and not a study of laws. I guess you are also not interested in damaging our and your reputation. A former colleague, Hajo Eicken ([hajo.eicken@gi.alaska.edu](mailto:hajo.eicken@gi.alaska.edu)) who is working in Fairbanks would be willing to speak with you (if you wish), and you can openly express your concern. He is a well-known sea ice scientist and he would be neutral and offered help in solving this problem.

Regards  
Gerrit
